Communication
Systems

This book presents cutting-edge work on real-time modelling and processing, a highly active research field in both the research and industrial domains. Going beyond conventional real-time systems, major efforts are required to

Download Ebook Digital

develop accurate and computational efficient real-time modelling algorithms and design automation tools that reflect the technological advances in high-speed and ultra-low-power transceiver communication architectures based on nanoscale devices.

Download Ebook Digital

The book addresses basic and more advanced topics, such as I/O buffer circuits for ensuring reliable chip-to-chip communication, I/O buffer behavioural modelling, multiport empirical models for memory interfaces, compact behavioural modelling for memristive devices,

Download Ebook Digital

And resource
reservation modelling
for distributed
embedded systems.

The respective
chapters detail new
research findings,
new models,
algorithms,
implementations and
simulations of the
above-mentioned
topics. As such, the
book will help both
