The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

Don't fly blind. See how the power of experiments works for you. When it comes to improving customer experiences, trying out new business models, or developing new products, even the most experienced managers often get it wrong. They discover that intuition, experience, and big data alone don't work. What does? Running disciplined business experiments. And what if companies roll out new products or introduce new customer experiences without running these experiments? They fly blind. That's what Harvard Business School professor Stefan Thomke shows in this rigorously researched and eye-opening book. It guides you through best practices in business experimentation, illustrates how these practices work at leading companies, and answers some fundamental questions: What makes a good experiment? How do you test in online and brick-and-mortar businesses? In B2B and B2C? How do you build an experimentation culture? Also, best practice means running many experiments. Indeed, some hugely successful companies, such as Amazon, Booking.com, and Microsoft, run tens of thousands of controlled experiments annually, engaging millions of users. Thomke shows us how these and many other organizations prove that experimentation provides significant competitive advantage. How can managers create this capability at their own companies? Essential is developing an experimentation organization that prizes the science of testing and puts the discipline of experimentation at the center of its innovation process. While it once took companies years to develop the tools for such large-scale experiments, advances in technology have put these tools at the fingertips of almost any business professional. By combining the power of software and the rigor of controlled experiments, today's managers can make better decisions, create magical customer experiences, and generate big financial returns. Experimentation Works is your guidebook to a truly new way of thinking and innovating.

Updated to incorporate the latest features, tools, and functions of the new version of the popular word processing software, a detailed manual explains all the basics, as well as how to create sophisticated page layouts, insert forms and tables, use graphics, and create book-length documents with outlines and Master Documents. Original. (All Users)

What exactly is virtualization? As this concise book explains, virtualization is a smorgasbord of technologies that offer organizations many advantages, whether you're managing extremely large stores of rapidly changing data, scaling out an application, or harnessing huge amounts of computational power. With this guide, you get an overview of the five main types of virtualization technology, along with information on security, management, and modern use cases. Topics include: Access virtualization-Allows access to any application from any device Application virtualization-Enables applications to run on many different operating systems and hardware platforms Processing virtualization-Makes one system seem like many, or many seem like one Network virtualization-Presents an artificial view of the network that differs from the physical reality Storage virtualization-Allows many systems to share the same storage devices, enables concealing the location of storage systems, and more

This is the first book that comprehensively describes the underlying principles that create flow in product development processes. It covers 175 principles organized into eight major areas. It is of interest to managers and technical professionals responsible for product development processes.

'Benjamin Hardy is one of the leading voices on well-being and productivity. Willpower Doesn't Work is an insightful guide to help us thrive in today's world' Arianna Huffington If you're relying on willpower alone to help you lose weight, improve your relationships or achieve more at work, you're doomed to fail. The environment around us is far too powerful, stimulating, addicting and stressful to overcome it through sheer determination. Willpower, grit, being positive - basically, all the tools you've been told are the keys to creating lasting change in your life - are insufficient in this high-paced, information-overloaded world we live in. The only way to stop just surviving and learn to truly thrive in today's world is to proactively shape your environment. That's the premise of Willpower Doesn't Work, by organisational psychologist and Medium's most-read self-help guru Benjamin Hardy. Building on copious existing research, as well as his own experience of growing up in a broken family afflicted by addiction and drug use, Hardy explains how people can change their lives on every level by making small, impactful changes in their environment like: * Creating 'enriched environments' - using tougher challenges and self-imposed deadlines to force yourself to rise to the occasion. * Growing into your goals - using radical personal accountability to keep yourself on target and on track. * Becoming the teacher - stepping into a leadership role (even before you think you're ready) to accelerate your skills. * Rotating your environments - getting out of your rut by literally changing your physical surroundings throughout the day or week. From simple steps like removing things that conflict with your values from your environment (like junk food, junk media, even junk people), to incorporating new tools (like fasting or adding 'positive triggers' to your world), these lessons make it possible to consciously shape your surroundings so you can lead a more productive and happier life. Hardy leans on his own story of making the decision to foster three young children to illustrate how any shift, no matter how huge, can become 'the new normal' if you support that change with a productive environment.
