A mystery surrounding a vintage car lies at the heart of this "moving, psychologically complex" novel of life, death, and history (Providence Journal). A beloved car becomes a piece of us—a way back into our histories, or forward into our destinies. For Emerson Tang, the only son of a prominent New England family, that car is a 1954 Beacon. A collector—of art and experience—Emerson keeps his prized possession safely stored away. When his health begins to fail, his archivist and caretaker is approached by a secretive

French painter determined to buy the Beacon at any cost. But they discover that the Beacon has been compromised—and that its importance reaches far beyond Emerson's own history. Soon they run into another who shares their obsession: the heir to the ruined Beacon Motor Company, who is determined to restore his grandfather's legacy. These four become unlikely adventurers, joined in their aim to reunite the Beacon's original body and engine, pitted against one another in their quest to claim it. Each new clue takes one closer to triumph, but also takes these characters, each grieving a deep loss, toward finding missing pieces of their own lives. A fast-paced ride through the twentieth century—to modernism, fascism, and industrialism, to Manhattan, a German zeppelin, a famed concours in Pebble Beach, and a road race in Italy—The Afterlife of Emerson Tang takes us deep into a complicated automotive romance. A novel of strangers connected across time, through a car that is so much more than a car, it asks us what should be preserved, what memories to trust, and whether some of the legacies we hold most dear—including that grand contraption, the automobile—can be made new again. "Passionately written . . . Champa delves into individual souls and emotions in her riveting, layered tale that holds its surprises right up until the end."

—Providence Journal "A vintage 1954 Beacon car is the axis around which four characters

revolve, trying to accept and resolve each of their sorrows in Champa's vividly detailed debut . . . [an] intellectual yet deeply human examination of what it means to live as well as to die." -Booklist

Protect and grow your finances with help from this definitive and practical guide to behavioral economics—revised and updated to reflect new economic realities. In their fascinating investigation of the ways we

handle money, Gary Belsky and Thomas Gilovich reveal the psychological forces—the patterns of thinking and decision making—behind seemingly irrational behavior. They explain why so many otherwise savvy people make foolish financial choices: why investors are too quick to sell winning stocks and too slow to sell losing shares, why home sellers leave money on the table and home buyers don't get the biggest bang for their buck, why borrowers pay too much credit card interest and savers can't sock away as much as they'd like, and why so many of us can't control our spending. Focusing on the decisions we make every day, Belsky and Gilovich provide invaluable guidance for avoiding the financial faux pas that can cost thousands of dollars each year. Filled with fresh insight; practical advice; and lively, illustrative anecdotes, this book gives you the tools you need to harness the powerful science of behavioral economics in any financial environment.

The explosive growth of e-commerce and online environments has made the issue of information search and selection increasingly serious; users are overloaded by options to consider and they may not have the time or knowledge to personally evaluate these options. Recommender systems have proven to be a valuable way for online users to cope with the information overload and have become one of the most powerful and popular tools in

electronic commerce. Correspondingly, various techniques for recommendation generation have been proposed. During the last decade, many of them have also been successfully deployed in commercial environments. Recommender Systems Handbook, an edited volume, is a multi-disciplinary effort that involves world-wide experts from diverse fields, such as artificial intelligence, human computer interaction, information technology, data mining, statistics, adaptive user interfaces, decision support systems, marketing, and consumer behavior. Theoreticians and practitioners from these fields continually seek techniques for more efficient, cost-effective and accurate recommender systems. This handbook aims to impose a degree of order on this diversity, by presenting a coherent and unified repository of recommender systems' major concepts, theories, methodologies, trends, challenges and applications. Extensive artificial applications, a variety of real-world applications, and detailed case studies are included. Recommender Systems Handbook illustrates how this technology can support the user in decision-making, planning and purchasing processes. It works for well known corporations such as Amazon, Google, Microsoft and AT&T. This handbook is suitable for researchers and advanced-level students in computer science as a reference.
