Class 12 board exam: SC asks CBSE to file response on pleas concerning dispute redressal mechanism

Supreme Court asked CBSE to file its response on two separate pleas with allegations against the board. The Supreme Court on Friday (October 8) asked the Central Board of Secondary Education (CBSE) to ...

The PISA 2000 Technical Report now describes the complex methodology underlying PISA 2000, along with additional features related to the implementation of the project at a level of detail that allows researchers to understand and replicate its analyses.

It was the belief that assessment is the driving force of curriculum that motivated the authors of this monograph to embark on a program of research and development into the use of digital technologies to support more authentic forms of assessment. They perceived that in responding to the educational needs of children in the 21st Century, curriculum needed to become more relevant and engaging, but that change was unlikely without commensurate change in methods and forms of assessment. This was particularly true for the high-stakes assessment typically conducted at the conclusion of schooling as this tended to become the focus of the implemented curriculum throughout the years of school. Therefore the authors chose to focus on this area of assessment with the understanding that this would inform assessment policy and practices generally in schools. This book provides a conceptual framework and outlines a project in which digital methods of representing students performance were developed and tested in the subject areas of Applied Information Technology, Engineering, Italian and Physical Education. The methodology and data collection processes are discussed, and the data is analysed, providing the basis for conclusions and recommendations.

This book is the fifth in a planned series of books that examine key topics (e.g., learner modeling, instructional strategies, authoring, domain modeling, assessment, impact on learning, team tutoring, machine learning, and potential standards) in intelligent tutoring system (ITS) design through the lens of the Generalized Intelligent Framework for Tutoring (GIFT) (Sottolare, Brawner, Goldberg & Holden, 2012; Sottolare, Brawner, Sinatra, & Johnston, 2017). GIFT is a modular, service-oriented architecture created to reduce the cost and skill required to author ITSs, manage instruction within ITSs, and evaluate the effect of ITS technologies on learning, performance, retention, transfer of skills, and other instructional outcomes. Along with this volume, the first four books in this series, Learner Modeling (ISBN 978-0-9893923-0-3), Instructional Management (ISBN 978-0-9893923-2-7), Authoring Tools (ISBN 978-0-9893923-6-5) and Domain Modeling (978-0-9893923-9-6) are freely available at www.GIFTtutoring.org and on Google Play.
