Counter This text focuses on the risks faced by managers of financial institutions and the methods and markets through which these risks are managed. Pertinent information regarding non-bank financial institutions, such as insurance companies and credit unions, provides a more holistic view of the challenges raised by factors such as interest rates, market risk, credit risk, and liquidity risk, among others. The highly regarded text continues to take the same innovative approach as the first, and second editions, focusing on managing return and risk in modern financial institutions. The books central theme is that the risks faced by financial institution managers, and the methods and markets, through which these risks are managed, are becoming increasingly similar. It has become less of issue whether the institution is chartered as a commercial bank, a savings bank, investment bank, or an insurance company. This edition includes even more coverage of non-bank institutions by adding more examples relating to credit unions and insurance companies.

Financial Markets and Institutions is aimed at the first course in financial markets and institutions at both the undergraduate and MBA levels. While topics covered in this book are found in more advanced textbooks on financial markets and institutions, the explanations and illustrations are aimed at those with little or no practical or academic experience beyond the introductory-level finance courses. In most chapters, the main relationships are presented by figures, graphs, and simple examples. The more complicated details and technical problems related to in-chapter discussion are provided in appendixes to the chapters. Since the author team's focus is on return and risk and the sources of that return and risk in domestic and foreign financial markets and institutions, this text relates ways in which a modern financial manager, saver, and investor can expand return with a managed level of risk to achieve the best, or most favorable, return-risk outcome.
