Who Was Who in Orthodontics is the culmination of some fifteen years of researching orthodontic history. Books, journals, newspapers, manuscripts, newsletters, and oral histories were culled for information to build the most complete collection of references yet available. This book consists of two main features: (1) biographies of more than 100 individuals important to orthodontic history (Part I) and (2) references to the literature of orthodontic history covering a 100-year span (Parts II and III). No longer does the researcher need the date of death to locate an obituary, because the entries are arranged alphabetically, in a style that permits quick access to the significant features of the individual's life. Each entry is followed by additional sources of information, if amplification or verification is desired. The history references are arranged both by subject and by author, and are not limited to the three- or four-decade window currently imposed by on-line sources. Although hard copy sources are not thus restricted, they can be accessed only on a year-to-year basis. Finally, a list of "firsts" can be found in Part IV, for those who like their orthodontic history in a capsule.

Despite the ever-expanding array of orthodontic journals and textbooks available today, too many clinical decisions are based on either anecdotal evidence or the espoused treatment philosophy of the current luminary of the lecture circuit. The authors of this book take an unbiased approach to orthodontics by systematically reviewing the relevant clinical literature and analyzing the scientific evidence to help practitioners select the most effective and efficient modes of treatment. Each chapter addresses a specific topic by summarizing the literature, critically reviewing the evidence, and offering impartial recommendations that can be adopted by clinical practitioners. Topics include Class II and Class III malocclusions, wires and wire sequences, dental asymmetries, causes of root resorption, and retention strategies, among others. This timely text enables busy clinicians to acquire knowledge of the current literature and apply evidence-based orthodontics in their practices.

Includes, beginning Sept. 15, 1954 (and on the 15th of each month, Sept.-May) a special section: School library journal, ISSN 0000-0035, (called Junior libraries, 1954-May 1961). Also issued separately.
