This book offers a highly accessible introduction to natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of written communication. Packed with examples and exercises, Natural Language Processing with Python will help you: Extract information from unstructured text, either to guess the topic or identify "named entities" Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find Natural Language Processing with Python both fascinating and immensely useful.

This book brings together a cutting-edge selection of the most current applications of mindfulness-based cognitive therapy (MBCT), giving clinicians as well as researchers a concise guide to current and future directions. Each chapter begins with an illustrative case study to give readers an example of how MBCT would be used in the clinical setting, followed by an overview of the condition, the theoretical rationale for using MBCT, modifications of MBCT for that disorder, evidence for MBCT use. Chapters also discuss practical considerations of MBCT, including patient selection, home practice, group size, format, and facilitator training. Written by some of the world's leading physicians using MBCT, Mindfulness-Based Cognitive Therapy: Innovative Applications is of great value to psychiatrists, psychologists, social workers, and therapists.

"Ethnographic study of the constitution of algorithms"--

'eMarketing eXcellence' offers an exciting new approach to help you build a customer-driven e-business. As the core text for the CIM's E-marketing award, the book offers a highly structured and accessible guide to a critical subject, providing a useful reference point for all students and managers involved in marketing strategy and implementation. A practical guide to creating and executing e-marketing plans, this book combines established approaches to marketing planning with the creative use of new e-models and e-tools. It is designed to support both marketers who are integrating e-marketing into their existing marketing and communications strategies and experienced e-marketers looking to optimise their e-marketing. The book shows how to: · Draw up an outline e-marketing plan · Evaluate and apply e-marketing principles & models · Integrate online and offline communications · Implement customer-driven e-marketing · Reduce costly trial and error · Measure and enhance your e-marketing · Drive your e-business forward As the core text for the CIM's new professional E-marketing Award, it provides comprehensive, critical coverage of the key areas of e-marketing planning for marketing professionals. Established marketing concepts such as customer relationship management, the marketing mix and the widely adopted SOSTAC® planning system, are re-examined in the new media context - and new approaches are defined, including business models, traffic building and web site design.

In response to a surprise incursion by Hezbollah combatants into northern Israel and their abduction of two Israeli soldiers, Israel launched a campaign that included the most complex air offensive to have taken place in the history of the Israeli Air Force (IAF). Many believe that the inconclusive results of this war represent a "failure of air power." The author demonstrates that this conclusion is an oversimplification of a more complex reality. He assesses the main details associated with the Israeli Defense Forces' (IDF's) campaign against Hezbollah to correct the record regarding what Israeli air power did and did not accomplish (and promise to accomplish) in the course of contributing to that campaign. He considers IAF operations in the larger context of the numerous premises, constraints, and ultimate errors in both military and civilian leadership strategy choice that drove the Israeli government's decisionmaking throughout the counteroffensive. He also examines the IDF's more successful operation against the terrorist organization Hamas in the Gaza Strip in December 2008 and January 2009, to provide points of comparison and contrast in the IDF's conduct of the latter campaign based on lessons learned and assimilated from its earlier combat experience in Lebanon.--Publisher description.

This one-stop Mega Reference eBook brings together the essential professional reference content from leading international contributors in the automotive field. An expansion the Automotive Engineering print edition, this fully searchable electronic reference book of 2500 pages delivers content to meet all the main information needs of engineers working in vehicle design and development. Material ranges from basic to advanced topics from engines and transmissions to vehicle dynamics and modelling. * A fully searchable Mega Reference Ebook, providing all the essential material needed by Automotive Engineers on a day-to-day basis. * Fundamentals, key techniques, engineering best practice and rules-of-thumb together in one quick-reference. * Over 2,500 pages of reference material, including over 1,500 pages not included in the print edition

What will you learn from this book? It's no secret the world around you is becoming more connected, more configurable, more programmable, more computational. You can remain a passive participant, or you can learn to code. With Head First Learn to Code you'll learn how to think computationally and how to write code to make your computer, mobile device, or anything with a CPU do things for you. Using the Python programming language, you'll learn step by step the core concepts of programming as well as many fundamental topics from computer science, such as data structures, storage, abstraction, recursion, and modularity. Why does this book look so different? Based on the latest research in cognitive science and learning theory, Head First Learn to Code uses a visually rich format to engage your mind, rather than a text-heavy approach that puts you to sleep. Why waste your time struggling with new concepts? This multi-sensory learning experience is designed for the way your brain really works.

This book is intended to give technological background and practical examples, but also to give general insight into the on-going technology development in the area of biodetection. The content is therefore suitable for an array of stakeholders (decision makers, purchasing officers, etc.) and end-users of biodetection equipment within the areas of health, environment, safety and security, and military preparation. The book is divided into three sections. The first section discusses the fundamental physical and biological properties of bioaerosols. The second section goes into more detail and discusses in-depth the most commonly used detection principles. The third section of the book is devoted to technologies that have been used in standoff applications. The last section of the book gives an overview of trends in bioaerosol detection. The reader of this book will gain knowledge about the different biodetection technologies and thus better judge their capabilities in relation to desired applications.

The Volume of "Advances in Machine Learning and Data Science - Recent Achievements and Research Directives" constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science (LAMDA 2017). The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions. These days we find many computer programs that exhibit various useful learning methods and commercial applications. Goal of machine learning is to develop computer programs that can learn from experience. Machine learning involves knowledge from various disciplines like, statistics, information theory, artificial intelligence, computational complexity, cognitive science and biology. For problems like handwriting recognition, algorithms that are based on machine learning out perform all other

approaches. Both machine learning and data science are interrelated. Data science is an umbrella term to be used for techniques that clean data and extract useful information from data. In field of data science, machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries, financial transactions, medical records, etc. The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science, with solutions to problems in field of image, video, data and graph processing, pattern recognition, data structuring, data clustering, pattern mining, association rule based approaches, feature extraction techniques, neural networks, bio inspired learning and various machine learning algorithms.
