The old masters of dealt only with the static features of the positional rules of chess. But these are insufficient to explain the basics of chess. The problem is that chess, like in other sciences, has undergone a dynamic revolution, but chess literature doesn't yet reflect it. In this major work Aagaard accessibly explains the rules of attack (the exploitation of a dynamic advantage), balanced between understandable examples, and deep analysis. Five years in the making, this book deals with weak kings, sacrifices, various minor attacking themes, intuitive sacrifices, opposite castling, modern king hunts, and enduring initiative.

Tom Shadyac is a storyteller. For over 25 years he was one of the top directors in Hollywood, producing some of its highest grossing comedies. However, after his world was rocked by a health condition, he began to consider his purpose, realising an intense need to live life with greater authenticity. Just about everything today comes with an operating manual - from your computer to your car, from your mobile phone to your iPad. Is it possible that Life comes with an operating manual, as well? That's the simple, but powerful premise of Tom Shadyac's inspiring and provocative first book. Written as a series of essays and dialogues, we are invited into a conversation that is both challenging and empowering. The question now is, can we discern what is written inside of this operating manual and garner the courage to live in accordance with its precepts? A Native American myth tells of two wolves that live inside each of us, two wolves engaged in a fierce battle for control of our lives. One wolf, the fearful wolf, walks in anger, ego, envy, greed, resentment and lies. The other wolf, the truthful wolf, lives in appreciation, kindness, love, joy, compassion, and empathy. Life's Operating Manual is expressed as a series of dialogues between the two wolves of fear and truth, with Tom reflecting on the life experiences that led him to these deep internal meditations. Authentic, direct and profound, Life's Operating Manual is an unexpected gift to any spiritual seeker.

Old Venetian lace has always been considered one of the high points of the textile arts, what with its imaginative design, technical brilliance, and universal appeal to all lands and times. It was the ancestor of most of the important laces that have since been made in Europe, and surviving specimens are the treasured possessions of the great museums of the world. Federico Vinciolo is one of the masters within this art. A leading Venetian designer, he was summoned in France to the court of Henry II, probably by Catherine de Medici, where he had the monopoly on manufacturing lace neck ruffs. In 1587 Vinciolo published a collection of his best patterns and designs, Les singuliers et nouveaux pourtraicts, which went through more than a dozen printings in France and Italy. It remains one of the basic books in the history of lace. For the modern needleworker who wishes to recapture the charm of this antique lace, Vinciolo's book offers 98 plates of fine patterns and designs in various techniques: needlepoint, darned netting, point coupé, counted thread work, and others. These include geometric forms, exuberant treatment of classical motives, Italian and Levantine designs, and much else that the modern worker, able to pick out a pattern, can re-create. Most of this material is nowhere else available. Vinciolo's designs are also of interest to the graphic artist who wishes delicate yet forceful textile images.

The principal chapters of this book form a collection of technical articles sp- ning many areas of research in robotics, these are followed by a set of short r- iniscences and tributes written by former students of Professor George A. Bekey. Professor Bekey, a pioneer in robotics, retired from the University of Southern C- ifornia (USC) in 2002 after serving on its faculty for forty years. He maintains an association with USC as University Professor Emeritus. Professor Bekey turned 80 in June 2008 - this is his Festschrift. As one of Professor Bekey's former students, it has been my privilege to know him for many years. This book represents the collective warm feelings of his former students, who remember their association with him in the fondest terms. Part I of this book is composed of technical chapters representing threads of active robotics research knitted loosely together. In many cases the themes of the chapters have their origins in the work the authors did when they were graduate students with Professor Bekey. These chapters are written for the reader interested in a sampling of modern research in Autonomous Robots. It is my hope that, for the serious reader, these chapters will serve as invitations to explore the ?eld via further reading and research.

In the Old Testament, God's people saw Him in a cloud by day and a pillar of fire by night. In the New Testament, the religious world thought they had God in a box behind the veil. When Jesus died, the veil was rent and God went public. In an ever changing world where the darkness prides itself by proclaiming they have psychic insights for every person, the church has become anemic, without as much as a sign, a miracle or a wonder. Where do we go from here? Faith is at a level the church has never known before. It is a faith being seen in the "here and now." We must understand what Jesus meant when He said, "I only do what I hear and what I see My Father do and say." You are about to enter that eternal zone, where time is losing its grip on the earth. Eternity is Invading Time.
