Sheep Kidney Dissection Lab Report

APHY 101 Sheep Kidney Dissection. Abstract The focus of this experiment is on the dissection of a kidney. The human urinary system consists of two kidneys, two ureters, one urinary bladder, and one urethra. This system has two basic functions, both of which occur in the kidneys. The first function is to remove nitrogenous wastes (such as creatine, urea, and uric acid) from the body.

Lab Report > APHY 101 Sheep Kidney Dissection.

The three 1. SHEEP KIDNEY DISSECTION main processes that occur in the kidney are filtration, secretion, and reabsorption. They are located in the upper quadrants of the abdominal cavity, against the posterior wall and behind the parietal peritoneum. In this lab, the external and internal anatomy of a sheep kidney was explored.

The kidney was placed into the dissection tray and examined thoroughly prior to dissection. Identification of the ureter and blood vessels was performed. A knife was used to make a coronal cut of the kidney in order to examine the interior structures. Photographs were taken as structures were identified. The sheep kidney is very similar to a human kidney.

## YOUR GUIDE TO DISSECTION - Philip Harris

This is a plain preserved specimen. Dissect the kidney of an adult sheep to discover the location and/or look of parts of the kidney, such as the renal artery, the renal pelvis, the ureter, the renal cortex, and more. Due to limited availability of sheep kidneys, we may occasionally substitute pig kidneys. Pig kidneys are slightly larger, just as easy to dissect, and have identical external and internal features.

## Dissection Lab Report by Aubrey Masters - Prezi

As you can probably see, we've got kidneys around the room, so we're going to do a kidney dissection. 00:00:17: Now we've started talking about, with this topic, we've talked about excretion. 00:00:20: Right, so- have a seat there. What we've done, we've started talking about excretion. 00:00:21

Using an approach that is geared toward developing solid, logical habits in dissection and identification, the Laboratory Manual for Anatomy & Physiology, 10th Edition presents a series of 55 exercises for the lab — all in a convenient modular format. The exercises include labeling of anatomy, dissection of anatomic models and fresh or preserved specimens, physiological experiments, and computerized experiments. This practical, full-color manual also includes safety tips, a comprehensive instruction and preparation guide for the laboratory, and tear-out worksheets for each exercise. Updated lab tests align with what is currently in use in today's lab setting, and brand new histology, dissection, and procedures photos enrich learning. Enhance your laboratory skills in an interactive digital environment with eight simulated lab experiences — eLabs. Eight interactive eLabs further your laboratory experience in an interactive digital environment. Labeling exercises provide opportunities to identify critical structures examined in the lab and lectures; and coloring exercises offer a kinesthetic experience useful in retention of content. User-friendly spiral binding allows for hands-free viewing in the lab setting. Step-by-step dissection instructions with accompanying illustrations and photos cover anatomical models and fresh or preserved specimens — and provide needed guidance during dissection labs. The dissection of tissues, organs, and entire organisms clarifies anatomical and functional relationships. 250 illustrations, including common histology slides and depictions of proper procedures, accentuate the lab manual's usefulness by providing clear visuals and guidance. Easy-to-evaluate, tear-out Lab Reports contain checklists, drawing exercises, and questions that help you demonstrate your understanding of the labs you have participated in. They also allow instructors to efficiently check student progress or assign grades. Learning objectives presented at the beginning of each exercise offer a straightforward framework for learning. Content and concept review questions throughout the manual provide tools for you to reinforce and apply knowledge of anatomy and function. Complete lists of materials for each exercise give you and your instructor a thorough checklist for planning and setting up laboratory activities, allowing for easy and efficient preparation. Modern anatomical imaging techniques, such as computed tomography (CT), magnetic resonance imaging (MRI), and ultrasonography, are introduced where appropriate to give future health professionals a taste for — and awareness of — how new technologies are changing and shaping health care.

Boxed hints throughout provide you with special tips on handling specimens, using equipment, and managing lab activities. Evolve site includes activities and features for students, as well as resources for instructors.

This extensively illustrated laboratory manual provides 33 stimulating laboratory exercises in human biology. The level of rigor, easy-to-read text, clear procedures, and abundant illustrations make the manual especially suited for readers who have had little, if any, prior science laboratory experience. The self-contained, self-directing exercises cover all major areas of introductory biology--from basic chemistry and cell structure to a little biotechnology--all emphasizing the human organism. Includes a very contemporary exercise on DNA Fingerprinting. The exercises require only standard equipment and materials, and each contain exercise objectives, background information, clearly described laboratory procedures, and a Laboratory Report for record observations, data, and conclusions. For anyone interested in laboratory work in introductory biology.

"It's an ideal companion for Thibodeau and Patton's Anatomy and Physiology, Sixth Edition, as well as any standard anatomy and physiology textbook."--BOOK JACKET.

This manual is designed for [the student] to use in the laboratory portion of an anatomy and physiology course. It has a number of features that will help [the student] learn about the structure and function of the human body.-Pref.
